

AI That Works Inside Macola

You don't have to replace Macola to modernize it — add an AI layer that already speaks its language. Works with **Macola 10**, **ES**, and **Progression**.

Freight Cost Savings

Agility Intelligence connects directly to Macola through its native API — no middleware, no duplicate database, no rip-and-replace. Ask questions, automate orders, and keep the ERP investment you already have.

THE PRODUCTS

One AI layer, four Macola workflows

ASK. QUERY. ACT.

AI Agent

Ask questions about Macola inventory, orders, or shipments in plain language and get an answer pulled from live ERP data.

CAPTURE. EXTRACT. CREATE.

AI Interpreter

Turn incoming Macola purchase orders, invoices, quotes, and packing slips into ERP-ready orders automatically.

MEASURE. MATCH. SHIP.

AI Packing

Automate box and carton selection for orders shipping out of your warehouse, cutting freight costs and packing errors.

PLAN. ADJUST. EXECUTE.

AI Fusion Production Scheduler

Build and adjust Macola production schedules in real time as demand, materials, and machine availability shift.

Purpose-built for the Macola ecosystem — end users and VARs alike.

WHY NOW

You don't have to replace Macola to modernize it

1 Modernize without migrating

Add a conversational, transactional AI layer on top of it instead of ripping it out. Your existing investment, configuration, and history stay intact.

2 Your Macola data stays yours

A native API connection means no middleware and no duplicate database to keep in sync. Customer data is not used to train the underlying AI models.

3 Human approval built in

Any transaction that changes ERP data requires human approval before it's submitted, unless it's part of an explicitly approved automated workflow.

THE FIFTH APP

AI Automation

DESIGN. TRIGGER. RUN.

A visual workflow engine for IT and operations teams — design automated processes on a canvas, trigger them from schedules, files, database changes, or webhooks, and monitor every run with full replay. Human-approval checkpoints included wherever you want them.

AT A GLANCE

- Native API connection — no middleware, no separate integration project
- Works with Macola 10, ES, and Progression
- Customer data is never used to train the underlying AI models
- Available to Macola VARs as an added AI layer for their client base

Bring AI to your Macola environment

See it work against your own Macola data in a live, 20-minute demo — no commitment, no migration required to try it.
